

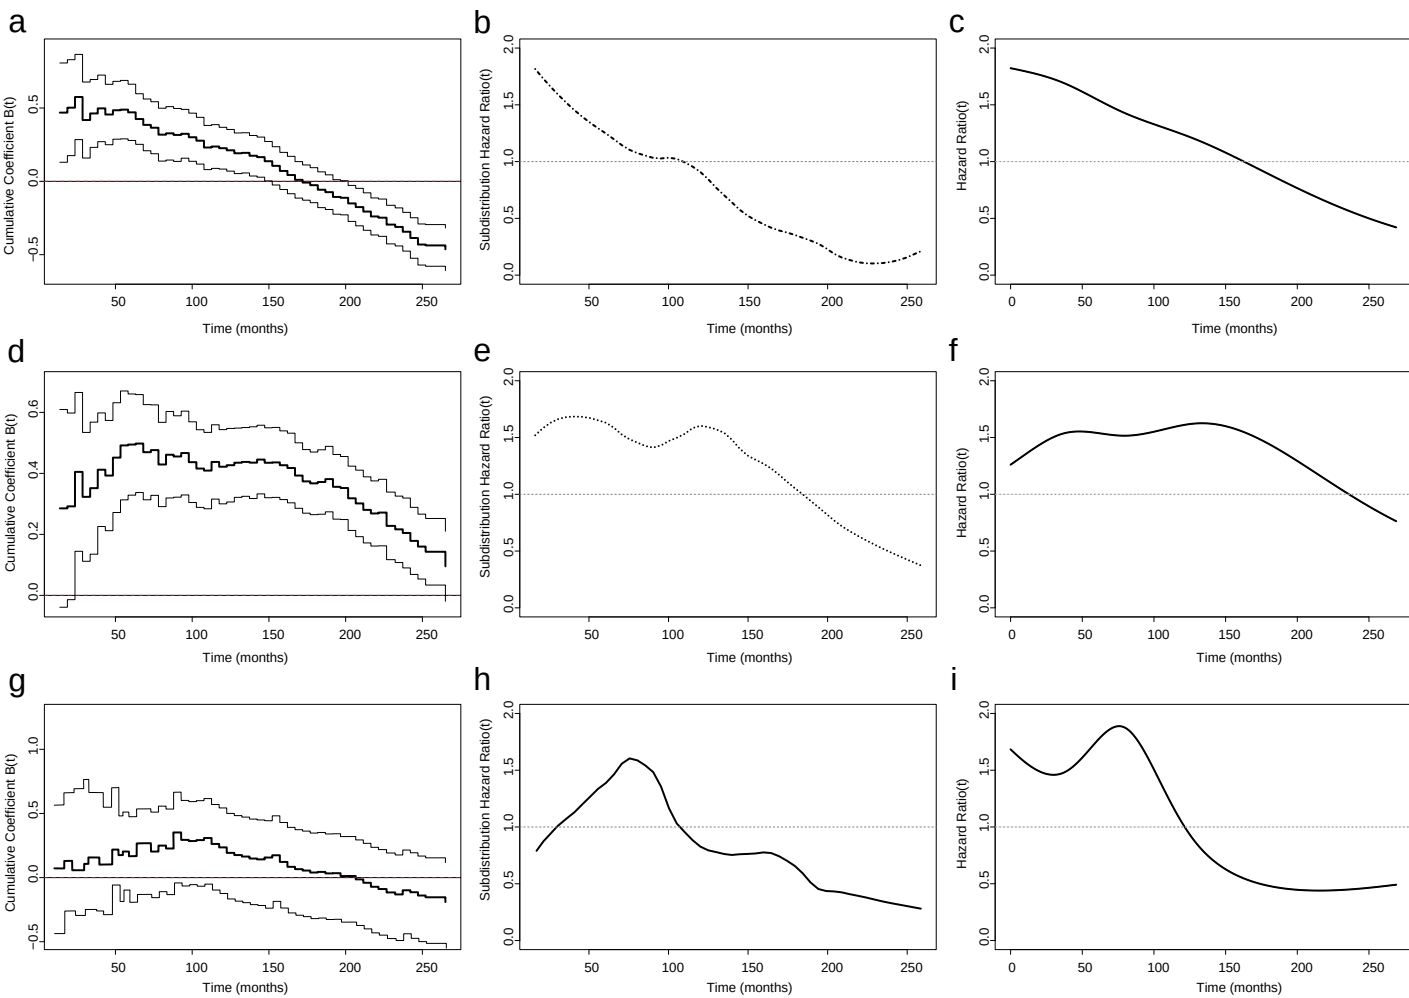

Figure 1. Time-varying effects of risk factors violating the proportional subdistribution hazard (PSH) assumption in patients with ductal carcinoma in situ (DCIS): cumulative regression coefficient curves (CRCC), subdistribution hazard ratios [sHR(t)], and cause-specific hazard ratio [HR(t)] curves.

(a)(d)(g) CRCC for age 71, age 61-70, and micropapillary carcinoma, respectively.
 (b)(e)(h) sHR(t) curves for age 71, age 61-70, and micropapillary carcinoma, respectively.
 (c)(f)(i) HR(t) curves for age 71, age 61-70, and micropapillary carcinoma, respectively.
