

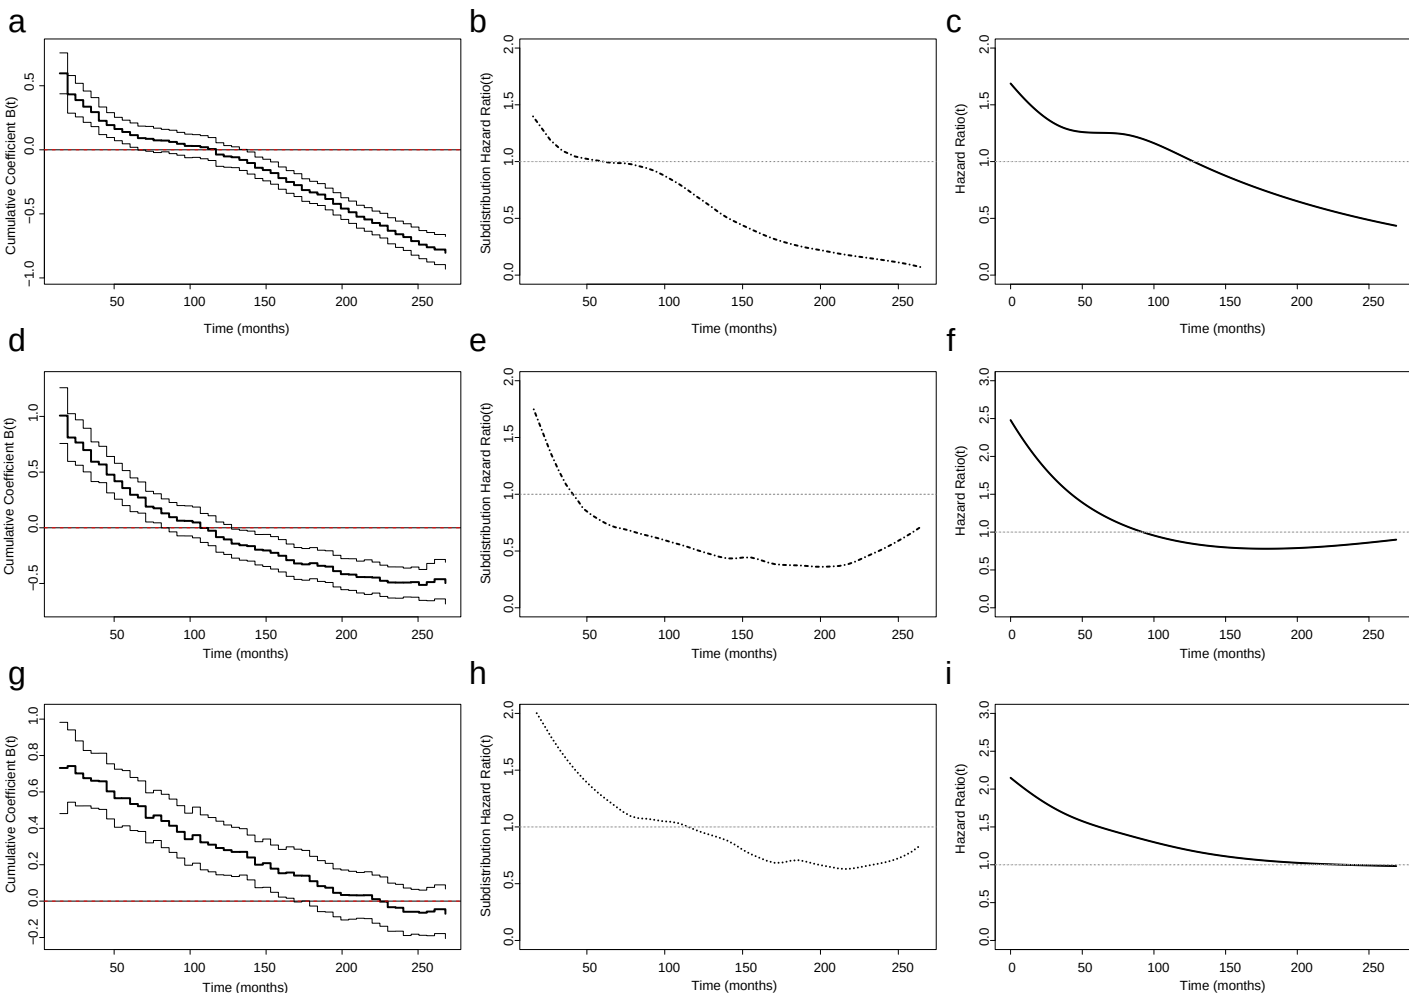

Figure 2. Time-varying effects of selected risk factors violating the proportional subdistribution hazard assumption in patients with invasive ductal carcinoma: age ≥ 71 , lymph node metastasis stage N3 (N3), and tumors >5 cm [cumulative regression coefficient curves (CRCC), subdistribution hazard ratio (sHR(t)), and cause-specific hazard ratio (HR(t))] curves.

(a)(d)(g) CRCC for age ≥ 71 , N3, and tumors >5 cm, respectively.

(b)(e)(h) sHR(t) curves for age ≥ 71 , N3, and tumors >5 cm, respectively.

(c)(f)(i) HR(t) curves for age ≥ 71 , N3, and tumors >5 cm, respectively.
