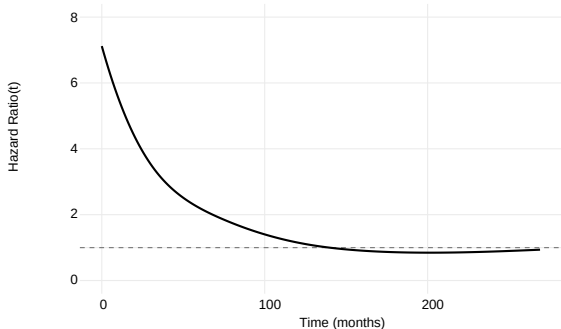

Figure 3. Mortality cause-specific hazard ratio [HR(t)] curves for selected risk factors violating the proportional subdistribution hazard (PSH) assumption in patients with invasive ductal carcinoma: age ≥ 71 , N3, and tumors > 5 cm.

(a) Mortality HR(t) curves for age ≥ 71 .

(b) Mortality HR(t) curves for lymph node metastasis stage N3 (N3).

(c) Mortality HR(t) curves for tumors > 5 cm.
