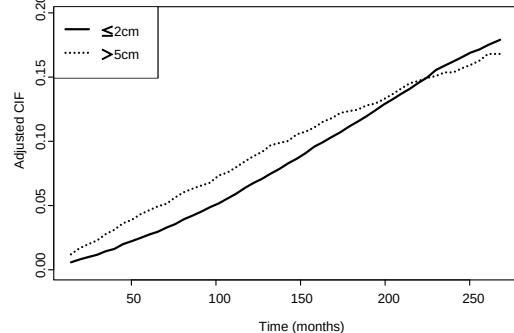

Figure 4. Confounder-adjusted cumulative incidence curves (CIC) of contralateral invasive breast cancer (CIBC) for risk factors violating the PSH assumption in patients with invasive ductal carcinoma (IDC).

(a) Confounder-adjusted CIC for age.

(b) Confounder-adjusted CIC for lymph node metastasis stage.

(c) Confounder-adjusted CIC for tumor size.

Abbreviation: PSH: Proportional subdistribution hazard.

Note: Confounder-adjusted cumulative incidence curves are presented only for variables violating the PSH assumption. Variables satisfying the PSH assumption (age 51–60, N1 lymph node metastasis) are not shown.
