

Supplementary Figure 15. Time-varying effects of selected risk factors violating the PSH assumption in Black patients with IDC: age ≥ 71 , N3, and tumors > 5 cm (CRCC, sHR(t), and HR(t) curves).

(a)(d)(g) CRCC for age ≥ 71 , N3, and tumors > 5 cm, respectively.

(b)(e)(h) sHR(t) curves for age ≥ 71 , N3, and tumors > 5 cm, respectively.

(c)(f)(i) HR(t) curves for age ≥ 71 , N3, and tumors > 5 cm, respectively.

Abbreviations: CRCC, cumulative regression coefficient curves; sHR(t), subdistribution hazard ratio; HR(t), cause-specific hazard ratio; N3, lymph node metastasis stage N3; IDC, invasive ductal carcinoma; PSH, proportional subdistribution hazard.
